

In this writing sample, I replaced specific information regarding feature, client and functionality. The replaced text will be in [square brackets].

Description

This feature lets **you choose a product** on which to **add a metafield** containing a list of other products that will show up on the product page under “[new feature]”. This will **replace the “[old feature]”** section on the selected product’s page.

Notes

- If a **product** added is **unavailable/out-of-stock**, it will **not appear** in the section.
- If **_all_** the products added are **unavailable/out-of-stock**, the “[new feature]” will not show up and will be **replaced by “[old feature]”**.

How to add “[new feature]”

1. From your admin panel, navigate to : Products > Select a product
2. Go to the selected product’s metafields by clicking on [APP]
3. Click on “new metafield” and add the following:

| Metafield title | Your input |
|-----------------|--------------------------------------|
| Namespace | [provided-feature-namespace] |
| Key | [provided-feature-key] |
| Value* | [productId1, productId2, productId4] |

***Value:** values here are examples. You will need to get the ids of all the products you wish to link to the initially selected product.This input field expects a comma separated list.
